VINITH PANDI A

Vinithpandi0310@gmail.com|7010337532|https://www.linkedin.com/in/vinith-pandi|Chennai,TamilNadu

I'm a dedicated student with a strong interest in Artificial Intelligence and Data Science, and have done work related to it in my UG course by enrolling for online courses, certifications and workshops. Now, I'm interested in doing masters in Artificial Intelligence to get in-depth knowledge about the working mechanism behind the scenes of LLMs, application of these LLMs in real-world situation to make the things fasters and the ethics needed to be followed while developing, deploying and using the LLMs

Participations & Achievements

Smart India Hackathon *11.2024*

- Participated in the Smart India Hackathon under the theme "Utilisation of images for monitoring of progress of construction activities for building construction products.".
- This allows the People to upload photos from the construction site. A CNN model analyzes those images to sort out the different stages of building. In that way, the whole system monitors how the project is moving along.

Rota-TechX-24hr Hackathon 25.05.2024

- Honoured with 2nd place for a compelling 'Smart Education' presentation for developing an education learning app for students, with the additional feature for students with impaired vision by audio recording sessions.

HACKFEST'24 *29.04.2024*

- Presented an idea on "Crowdsource Disaster Management," - Designed an idea for a crowdsourced disaster management platform enabling citizens and rescue agencies to interact through dashboards.
- The system handles features such as tracking missing persons, issuing public alerts, activating SOS triggers, and delivering real-time updates through SMS and email. It includes integrated chatbot support plus training modules that build awareness and speed up responses in crises.

INOAUG|APEX 07.2024

- Has Actively Participated in India's Premier Oracle APEX Hackathon – Xcelerate 2024 and succeeded to level 2.
- Worked in Oracle Apex (low-code, no-code platform) by using the pre-defined widgets.

Certifications and Related work

1. **Python Application with OPENAI** | **MSME- MSME-TECHNOLOGY DEVELOPMENT CENTRE, CHENNAI(CFTI)**
   - Learned About different types of models(DALLE , Embedding ,TTS etc)
   - .Developed a single-page application using Python that integrates OpenAI to allow users to provide a content link for web scraping. The scraped content is vectorised using **embedding-ada-002** and stored in a **Pinecone** database. Users can ask queries; these queries will be transformed into vectors for similarity search with the content available in the database. Then, the query and the retrieved content will be passed together to the **gpt-4o-mini**, which will generate a clear and accurate response that is relevant to the uploaded content

2. **Generative AI** | **MSME-TECHNOLOGY DEVELOPMENT CENTRE, CHENNAI(CFTI)**
